Sleepypod Unveils Clickit Range Car Safety Harness, Addressing the Challenge of Restraining Dogs with Narrow and Deep Chests

In independent testing by the Center for Pet Safety, Clickit Range earned a 5 Star rating for dogs up to 110 pounds.

Pasadena, Calif.—January 2, 2025—Sleepypod®, a Pasadena-based company known for reinventing pet products through innovative design, today unveils Clickit Range car safety harness for dogs. Clickit Range is designed to protect dogs with a distinctive sighthound shape when riding in a car. Sighthounds have long legs, a deep chest, and a wiry body.

“Like humans, dogs come in all shapes and sizes, so car harnesses designed for the average dog shape do not address the unique sighthound shape,” says Michael Leung, Sleepypod lead product designer and co-founder.

“The sighthound characteristics of a deep chest and skinny waist make it challenging to restrain these dogs whose center of gravity is different from the common dog shape,” Leung continues. “Building on Sleepypod’s multiple award-winning car safety harness designs, Clickit Range addresses the challenge of protecting dogs with the aerodynamic body and build of sighthounds.”

Sleepypod crash-tested Clickit Range at the U.S. child safety seat standard FMVSS 213. Using DASH 1.0, Sleepypod’s proprietary sighthound-shaped crash test dog, Clickit Range kept the dog simulant on the seat for the duration of the test while minimizing lift and rotation. DASH 1.0 is the first of Sleepypod’s eleven crash test dummy pets to represent the sighthound dog shape. Find more information about Sleepypod’s crash test pets at sleepypod.com/pages/research.

Clickit Range was independently tested by the Center for Pet Safety, earning a 5 Star certification rating for dogs weighing up to 110 pounds. View the Center for Pet Safety certification test at <https://www.centerforpetsafety.org/sleepypod-clickit-range/>

Availability

Clickit Range will be available for purchase in Spring 2025, starting at sleepypod.com.

About Sleepypod

Sleepypod transformed pet product design with the introduction of its multiple award-winning, innovative Sleepypod mobile pet bed in 2006. Visually bold and intuitive, the [Sleepypod](#), made from durable, high-quality materials, set a new standard for pet products to include safety testing. Today, Sleepypod products continue to set the high bar for pet product safety and design. Every product is designed with thoughtful features for efficient living and then tested for safety. From the BPA-free silicone in Sleepypod's Yummy Travel Bowls to the crash-testing of Sleepypod's entire carrier and car harness lines at U.S., Canadian, and E.U. child safety seat standards, Sleepypod devotes careful and caring attention to each detail in every product.
